

SYMMETRY

Waterfall is pleased to introduce an exciting new concept in the ever growing demand for Heavy Glass Sliders. Symmetry features two sliding panels that roll on the **INSIDE** of two heavy-duty stainless steel tubes. This configuration creates a footprint at the bottom of the unit of only 2-5/16" (significantly less than conventional doors with the panels outboard of the header) allowing the unit to be installed on tubs and showers with narrow curbs. Additionally, Symmetry provides easy installation by eliminating wall jambs and adding idle rollers in place of a traditional curb. Symmetry is available in Chrome, Brushed Nickel and Matte Black.
